EDUCATION

Master of Science in Robotics and Autonomous Systems (Artificial Intelligence) <i>Arizona State University</i>	Aug 2024 – May 2026 GPA: 3.4/4.0
Bachelor of Technology in Artificial Intelligence <i>G. H. Raison Institute of Engineering and Technology</i>	Aug 2020 – Jun 2024 CGPA: 7.2/10

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, TypeScript, SQL, C, R, HTML, CSS, PHP
Machine Learning & AI: TensorFlow, PyTorch, Scikit-learn, OpenCV, Hugging Face, LangChain, LLMs, NLP, BERT, LSTM
Frameworks & Libraries: Node.js, Express.js, React.js, Pandas, NumPy, Apache Spark, Apache Kafka
Databases & Cloud: MongoDB, MySQL, PostgreSQL, AWS SageMaker, Azure ML, Google Vertex AI, Snowflake, Redis
DevOps & Tools: Docker, Kubernetes, Jenkins, Git, GitHub, JIRA, Postman, CI/CD Pipelines
Robotics & Systems: ROS, Gazebo, CoppeliaSim, Control Systems, Sensor Integration, Arduino, Raspberry Pi
Certifications: Oracle AI Foundations, Google Digital Marketing, MATLAB

PROFESSIONAL EXPERIENCE

Web Development Intern: PrimaThink Technologies Limited	Jan 2024 – Jun 2024
- Developed responsive Blood Bank Management System using JavaScript, HTML, CSS, PHP, and MongoDB, improving system efficiency by 46% through optimized database queries and data workflows - Implemented Git/GitHub version control with CI/CD pipelines and Jest testing framework, reducing debugging time by 75% and achieving 85%+ test coverage - Managed agile sprints using JIRA and Postman for API validation, accelerating feature delivery by 23%	
Software Engineering Intern: JPMorgan Chase & Co.	Mar 2022 – Jun 2023
- Architected real-time stock data analysis pipeline using Python, Pandas, NumPy, and Apache Kafka, processing 10,000+ data points per second with Scikit-learn for machine learning preprocessing - Optimized application performance by 33% by refactoring Python scripts in Jupyter Notebooks for statistical modeling and predictive analytics with PostgreSQL database - Deployed containerized applications using Docker and Kubernetes, reducing environment setup time by 51% with Jenkins CI/CD pipelines	
Tech Outreach Lead: Tech Learn. Live	Nov 2021 – Dec 2021
- Led 5+ technical workshops on AI/ML, Python, TensorFlow, and PyTorch, teaching 530+ students and facilitating collaboration across technical teams - Created marketing campaigns using SQL databases for analytics tracking, reaching 1,000+ students and increasing tech event participation by 40% - Coordinated with cross-functional teams to organize technical events, resulting in improved student engagement and establishment of sustainable technical community	

PROJECTS

Harmony - Mental Health Monitoring for Astronauts	Aug 2025 – Dec 2025
- Spearheaded cross-functional team of 5 engineers to build TRL Level 4 mental health monitoring system leveraging LSTM and BERT deep learning models for continuous astronaut psychological assessment during extended space missions - Designed HIPAA-compliant NLP pipeline using Python and TensorFlow processing astronaut communications and journal entries to identify psychological distress patterns, achieving 87% accuracy in early detection of mental health indicators - Secured venture capital interest by presenting commercial scalability roadmap for Earth-based remote worker mental health monitoring, demonstrating \$2.3M addressable market opportunity	
Maze Navigation with MyCobot Pro 600	Aug 2024 – Dec 2024
- Developed autonomous navigation system for 4x4 maze traversal combining inverse kinematics algorithms with computer vision using Python and OpenCV, achieving 92% successful navigation rate - Implemented real-time object detection and obstacle avoidance using ROS and OpenCV, reducing collision incidents by 78% compared to baseline navigation algorithms - Created digital twin simulation environment enabling remote development and testing, accelerating iteration cycles by 40% without requiring physical robot access	
Stock Price Predictor · Published Research	Aug 2023 – Dec 2023
- Built Q-learning reinforcement learning model using TensorFlow and PyTorch processing 50,000+ daily stock data points with Pandas and NumPy to generate real-time trading signals, achieving 17% simulated ROI increase over six-month backtest period - Published research in International Journal of Novel Research and Development, contributing to academic discourse on machine learning applications in financial markets - Presented findings on reinforcement learning optimization techniques at institutional research symposium, demonstrating novel approach to temporal difference learning in volatile market conditions
